## PROFESSIONAL SUMMARY

---

Software Engineering student (9th of 10 semesters, Daffodil International University) with hands-on experience building full-stack web applications and LLM-integrated AI tools. Comfortable across the stack — from designing REST APIs and relational/NoSQL schemas to shipping React and PHP front ends — with a track record of independently architecting, building, and deploying production-quality projects. Strong interest in applying AI/LLM engineering to real-world backend systems and developer tooling.

## TECHNICAL SKILLS

---

**Languages:** Python, JavaScript, PHP, Java, C

**Frontend:** React.js, HTML5, CSS3, Tailwind CSS, Bootstrap

**Backend:** Node.js, Express.js, PHP, REST API design

**Databases:** MongoDB, MySQL

**AI & Data:** LLM-integrated application development, prompt engineering, NumPy, Pandas, Matplotlib, Seaborn, Streamlit

**Tools & DevOps:** Git, GitHub, Linux, Vercel deployment, API integration

## SELECTED ENGINEERING PROJECTS

---

**Mozammels Gallery** | *MERN Stack (MongoDB, Express, React, Node.js)*

- Built a full-stack gallery application with an admin panel for image upload, categorization, and content management.
- Implemented RESTful APIs in Node.js/Express backed by MongoDB, structuring data models to support scalable content operations.

**Adv** | *MERN Stack (MongoDB, Express, React, Node.js)*

- Architected and implemented an advanced MERN stack application, structuring the front end in React and the backend around Express/Node.js REST APIs.
- Designed the MongoDB data layer and API routes to support the application's core features end to end.

**Mental Health Symptom Triage** | *MERN Stack (MongoDB, Express, React, Node.js), Vercel*

- Engineered and deployed a full-stack MERN application performing real-time mental health symptom analysis based on user responses.
- Built the React front end and Node.js/Express backend logic for the assessment engine, and deployed the application to Vercel for public access.

**HustleHood BD** | *PHP, MySQL, REST APIs*

- Developed a full-stack business platform with user authentication, product listings, and end-to-end product-selling workflows.
- Designed the relational MySQL schema and implemented CRUD REST endpoints to manage users, products, and orders.

**Dengue Symptom Triage Chatbot** | *Python, LLM Integration, Prompt Engineering*

- Designed and implemented an LLM-powered chatbot that triages dengue symptom severity from free-text user input, translating clinical risk criteria into structured prompt logic.
- Built the multi-turn conversation flow and response-generation logic to guide users through symptom collection and deliver a real-time risk classification.

## EDUCATION

---

**BSc in Software Engineering** — Daffodil International University (DIU), Dhaka 2023 – Present (Final Year – 9th of 10 Semesters)

## ADDITIONAL

---

- Competitive Programming: active on LeetCode and HackerRank, with an ongoing focus on data structures and algorithmic problem solving.
- Technical Interests: AI/LLM application engineering, backend systems design, and developer tooling.
- Maintains a public GitHub with source code and live deployments for all projects listed above.
